

## Assessments, Reports and Surveillance studies

Listed here are New Zealand government assessments, surveillance reports and studies about the use of the Btk-based pesticide in the three eradication programmes conducted in New Zealand. Additionally we have included other relevant studies, papers and reports from both New Zealand and overseas. Few reports are still available online - (or links we have longer work) - but we do hold paper copies of all of them. We aim to update these references whenever relevant studies and reports are published.

Note: The references below do not include the reports and studies listed on the main Peoples Inquiry web page.
